# Excluding Flex Fare, yellow trips per day were flat (+0.3%)

Flex Fare trips surged from ~5,100 to ~22,400 per day (+337%), accounting for ~99% of Yellow taxi's growth. Excluding Flex Fare, Yellow trip volume grew by only +0.3%. This spike likely reflects an internal reporting/recording change rather than sudden organic demand.

**Flex Fare vs. Standard Yellow Volume**

| fee_period | Flex Fare per Day | Yellow Excl Flex per Day |
|---|---|---|
| Before fee | 5135 | 93693 |
| After fee | 22445 | 93936 |

# Pickups outside Manhattan grew faster than Manhattan’s +3.2%

Borough is not the congestion relief zone; this is a pattern, not proof of the fee’s effect.

**Data Hygiene & Cleaning Rules** A trip record was kept only if:

1. Pickup timestamp was strictly within the respective month (Feb 2024 or Feb 2025).
2. Pickup zone ID was present and valid within NYC boundaries.
3. Payment type excluded codes 3, 4, and 6 (no charge, dispute, voided).
4. Fare was positive ($> \$0$), except Flex Fare records with $\$0$ fare but valid distance/duration.
5. Trip distance was strictly greater than 0 miles.
6. Trip duration fell strictly between 0 and 360 minutes.
7.

**Key Analytic Caveats**

- **Daily Normalization:** Feb 2024 contained 29 days (leap year) while Feb 2025 contained 28 days; all comparative analysis relies on daily means.
- **Flex Fare Discontinuity:** Yellow taxi growth (+17.8%) is driven almost entirely by Flex Fare trips (+337%); excluding Flex Fare, yellow taxi volume remained flat (+0.3%). This likely reflects a change in how meter/e-hail trips were categorized rather than new market demand.
- **Tipping Data:** Yellow taxi tips are recorded only for credit-card transactions; FHV (Uber/Lyft) records do not log granular payment types.
- **Correlation vs. Causation:** This two-month window reflects observed behavioral patterns; it does not isolate congestion pricing from broader economic, fare, or weather shifts.
